REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Claims 1-8, 10-32, 34-46, 48, 52-58 are considered allowable since when reading the claims in light of the specification, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims. As to claims 1, the prior art of record does not teach generating a busy command based at least in part on the measured utilization by other remote stations of the shared resource. As to claims 3, 4, the prior art of record does not teach a transmitter for transmitting the common access grant to the remaining remote stations on one or more common grant channels and for transmitting a busy signal comprising one or more busy commands.

As to claims 10, 11, 15-17, 55, 56, 57, 58, the prior art of record does not teach a receiver for receiving one or more common grant channels from a base station and for receiving a busy signal based at least in part on a measured utilization by other remote stations of a shared resource from the base station. As to claim 12, the prior art of record does not teach wherein the receiver further receives an ACK-and-Continue command; and the transmitter transmits an additional portion of data from the data buffer in response to a previously decoded access grant, responsive to the received busy signal.

As to claim 13, the prior art of record does not teach wherein the transmitter further transmits a limited portion of the data in the data buffer autonomously, irrespective of whether an access grant has been received, responsive to the received busy signal. As to claim 14 and 38, the prior art of record does not teach wherein the receiver further receives a NAK command; and the transmitter retransmits the portion of data from the data buffer previously transmitted in response to a previously decoded access grant, responsive to the received busy signal. As to claims 18-21, the prior art

of record does not teach a receiver for receiving one or more common grant channels from a base station and for receiving a busy signal based at least in part on a measured utilization by other remote stations of a shared resource from the base station.

As to claims 22-24 and 25-32, the prior art of record does not teach transmitting a busy signal when the measured utilization exceeds a predetermined threshold. As to claim 34, the prior art of record does not teach decoding an access grant comprising a common grant on one of the one or more common grant channels; receiving one or more individual grant channels; and wherein the access grant alternately comprises an individual grant directed on one of the one or more individual grant channels. As to claim 35, the prior art of record does not teach transmitting a limited portion of the data in the data buffer autonomously, irrespective of whether an access grant has been received, responsive to the received busy signal. As to claim 36, the prior art of record does not teach receiving an ACK-and-Continue command; and transmitting an additional portion of data from the data buffer in responsive to a previously decoded access grant adapted to the received busy signal.

As to claim 37, the prior art of record does not teach transmitting a limited portion of the data in the data buffer autonomously, subsequent to a received ACK, responsive to the received busy signal. As to claim 38, the prior art of record does not teach decoding an access grant comprising a common grant on one of the one or more common grant channels; and transmitting a portion of data from the data buffer in response to a decoded access grant adapted in accordance with the received busy signal. As to claims 39-41 and 42-45, the prior art of record does not teach receiving a busy signal from the base station, wherein the busy signal is based at least in part on a measured utilization by other remote stations of a shared resource.

As to claims 46, 48, the prior art of record does not teach means for transmitting the common access grant to the remaining remote stations on one or more common grant channels; means for measuring the utilization of the shared resource; and means for transmitting a busy signal when the measured utilization exceeds a predetermined

threshold. As to claims 52-54, 2, 5-8, the prior art of record does not teach generating a busy command when the measured utilization exceeds a predetermined threshold ; and a transmitter for transmitting the common access grant to the remaining remote stations on one or more common grant channels and for transmitting a busy signal comprising one or more busy commands. Furthermore, claims 50 and 59 had been canceled by the examiner's amendment dated 02/13/2009. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
